

CIMTUFF® 9100 Talc Series

CIMTUFF® 9100 Series talcs are produced from high purity, <u>high-brightness</u> ore, which provide low iron content, low surface area and excellent color in dry form as well as when incorporated with resins. **CIMTUFF® 9100 Series** talcs are primarily used in performance polypropylene, where color is critical along with improved tensile strength, flexural modulus, heat distortion temperature, increased stiffness, reduced shrinkage, and lower compounding costs are required. **CIMTUFF®, 9100 Series** talcs are platy, hydrophobic, non-abrasive and chemically inert. The **CIMTUFF® Series** is the talc of choice for a wide range of industrial coatings formulators for improving weatherresistance and durability.
